

CMIE API

CMIE has introduced an API functionality in the service to extract data directly from the CapEx database. To use the API, a valid subscription and an API Passkey is required.

Extracting data using the API

1. Generate the API Passkey.
2. Make API call (HTTPS).
3. Consume the Response.

Note:

- API calls are made using HTTPS request. The parameters are to be sent as HTTP-POST parameter.
- All platforms and programming languages come with native functions and libraries to support HTTP communication and protocol.

Generating the API Passkey

1. Login to <https://register.cmie.com>.
2. In the top menu bar, click **API Passkey**.
3. Click **Generate New API Passkey** button to generate a new API Passkey.

Note:

- The API passkey acts as a key to access the API service. It should be stored securely to avoid misuse.
- The API passkey can be regenerated anytime.

Introduction

In CapEx, data can be extracted by executing the "**Query Batches**" or **by Project saved Set** or by accessing "**Project Profile Reports**."

The API facility allows users to automate the process for executing Query batches, Project saved set and accessing project profile reports.

The output of the APIs are available in JSON format.

1. Project Profile API

Project Profile API can be used to download the report for a project.

The project profile report is similar to the project profile available on the website when you click on a project name.

This requires a PROJECTID which is available in the project profile on the website or in a query output and is to be sent in the API call.

Data gets downloaded in JSON format as soon as the API call is made, unless there is an error, which is also a JSON response that contains the status.

Project Details API Request:

API URL: <https://capex.cmie.com/api/>

Post Parameters :

1. apikey=<YOUR_API_KEY>
2. projectid=<PROJECTID>

Project Details API Response:

API Response is in JSON format.

Example of response

```

Example using Shell-Curl:

```
curl -F "apikey=<YOUR_API_KEY>" \  
      -F "projectid=373697:1" \  
      -X POST https://capex.cmie.com/api/ -o -
```

Example using PHP:

```
<?php  
$ch= curl_init();  
curl_setopt($ch, CURLOPT_URL, 'https://capex.cmie.com/api/');  
curl_setopt($ch, CURLOPT_POST, true);  
curl_setopt($ch, CURLOPT_RETURNTRANSFER, 1);  
curl_setopt($ch, CURLOPT_POSTFIELDS, [ 'apikey' => '<YOUR_API_KEY>',  
'projectid' => '373697:1' ] );  
$response= curl_exec($ch);  
if(curl_errno($ch))  
    printf("Error: %s\n", curl_error($ch));  
else  
    printf("Response: %s\n", $response);  
curl_close($ch);  
?>
```

Error Response:

JSON Example (in case of error)

```
Array  
(  
    [meta] => Array  
        (  
            [errno] => -52  
            [errmsg] => Invalid parameter value. Project not found  
            [projectid] => 373697:111  
            [user] => ###  
            [admin] => ###  
            [minum] => ###  
            [service_type] => ###  
            [account_validity] => ###  
            [total_hit_limit] => ###  
            [total_hit_consumed] => ###  
            [ip] => ###  
            [servertime] => 2024-09-18 14:34:49  
        )  
    )  
)
```

Note:

- YOUR_API_KEY and PROJECTID must be replaced with the actual values in order to execute this api.
- Since the size of the file for the reports are small, they are streamed directly.

2. Project Set API

The Project Set API allows you to download output reports for a given User Set, which consists of a list of projects. To use it, you must first create a project set of your choice using the **"Create Project Set"** option under the Project Set menu.

Additionally, you can save a user set, which is available in the query output for a selected project list, as well as in Aggregates and Flow of Investments.

This API requires two parameters SETID and REPORTTYPE.

1. SETID is available in the Project Set page on the website.

2. REPORTTYPE are of 5 types:

Report Type	Output Columns in Json file"
"details"	Company Name Project Name Cost (Rs.million) Project Status Industry Group Ownership Group Expected completion by dates Location state Project ID
"events"	Company Name Project Name Cost (Rs.million) Project Status Event Date Project ID
"products"	Company Name Project Name Cost (Rs.million) Project Status Products Capacity Units Industry Group Project ID
"locations"	Company Name Project Name Cost (Rs.million) Project Status Location District State Project ID
"associates"	Company Name Project Name Cost (Rs.million) Project Status Country Associate Type Associate Name Project ID

Data gets downloaded in JSON format as soon as the API call is made, unless there is an error, which is also a JSON response that contains the status.

Note: The number of projects in a set must be less than 1,000 projects to be called using the API.

Project Set API Request:

API URL: <https://capex.cmie.com/api/>

Post Parameters :

1. apikey=<YOUR_API_KEY>
2. setid=<SETID>
3. reporttype=<REPORTTYPE>

Project Set API Response:

API Response is in JSON format.

curl_close($ch);
?>

```

3. Query Batch API

The Query Batch API allows you to execute a batch and download output reports for a given Batch Id, which consists of Outputs filter. To use it, you must first create a Query Batch of your choice using the Query Database filters. You can see all the saved query batches at "Saved Query Batch" Page inside Query Page option in menu.

This API requires two parameters BATCHID and REPORTTYPE.

1. BATCHID is available in the Saved Query Batch page on the website.

2. REPORTTYPE are of 5 types:

Report Type	Output Columns in Json file"
"details"	Company Name Project Name Cost (Rs.million) Project Status Industry Group Ownership Group Expected completion by dates Location state Project ID
"events"	Company Name Project Name Cost (Rs.million) Project Status Event Date Project ID
"products"	Company Name Project Name Cost (Rs.million) Project Status Products Capacity Units Industry Group Project ID
"locations"	Company Name Project Name Cost (Rs.million) Project Status Location District State Project ID
"associates"	Company Name Project Name Cost (Rs.million) Project Status Country Associate Type Associate Name Project ID

Data gets downloaded in JSON format as soon as the API call is made, unless there is an error, which is also a JSON response that contains the status.

Note: The number of projects after execution of batch must be less than 1,000 projects to be called using the API.

Project Set API Request:

API URL: <https://capex.cmie.com/api/>

Post Parameters :

1. apikey=<YOUR_API_KEY>
2. batchid=<BATCHID>
3. reporttype=<REPORTTYPE>

Project Set API Response:

API Response is in JSON format.
